10. Other:						

## - Continuation Sheet (PTOL-303)

Continuation of 2. NOTE: Applicant asserts that Rubin et al. does not teach sinusitis. Column 10, lines 26-34 teaches the invention to be useful for conditions such as inter alia sinusitis and the use of the surfactant to enhance the distribution of inhaled anti-inflammatory agentsand bronchodilators. In response to applicant's argument that Rubin et al. is nonanalogous art, it has been held that a prior art reference must either be in the field of applicant's endeavor or, if not, then be reasonably pertinent to the particular problem with which the applicant was concerned, in order to be relied upon as a basis for rejection of the claimed invention. See In re Oetiker, 977 F.2d 1443, 24 USPQ2d 1443 (Fed. Cir. 1992). In this case, Rubin et al. teach an anti-inflammatory agent that is inhaled for obstruction of the upper respiratory tract. Schmitt et al. teach that the particle size is important because particles smaller than 0.5  $\mu$ m are exhaled and thus not retained in the lungs while particles greater than 8.0  $\mu$ m such as those produced in an atomizer do not reach the periphery of the lungs and therefore are not effective in preventing or treating the infection. Saunders Manual is cited to teach the state of the art regarding treatment of sinusitis.
